Diamond Grade™ Conspicuity Markings
983-71 For School Bus Safety Markings

Product Bulletin 983-71
March 2006
Replaces PB 981-71 dated September 1999

Description
3M™ Diamond Grade™ Conspicuity Markings 983-71 for school buses are designed to mark emergency exits, and the perimeter (sides and rear) of school buses for enhanced visibility and detection. This highly retroreflective marking consists of prismatic lenses formed in a durable transparent resin, scaled with a white synthetic film and backed with an aggressive pressure-sensitive adhesive with a clear liner to protect the adhesive prior to application.

3M’s 983-71 markings have excellent angularity that allow them to be seen at angles up to and beyond 45˚ from perpendicular. This feature is important in cross traffic, turning maneuvers and when parked along roadways.

Series 983-71 meets or exceeds all FMVSS-217 requirements.

Markings are available in standard size rolls of 1 inch, 1-3/4 inch, and 2 inch widths by 50 yards.

Properties

**Color:** Yellow 983-71

**Adhesive:** Pressure Sensitive

**Minimum application temperature:** 50˚F (10˚C) (sheeting and substrate)

**Maximum application temperature:** 100˚F (30˚C) (sheeting and substrate)

**Liner:** Clear Poly

Coefficient of Retroreflection

The typical coefficient of retroreflection values of these sheetings when new are given in Table A in terms of candelas per lux per square meter. Measurements are made in accordance with ASTM E-810 “Standard Test Method for Coefficient of Retroreflective Sheeting” in terms of candelepower per foot-candle per square foot (cd/lux/m²).

**Table A. Typical Coefficient of Retroreflection (R⁴) for New Marking (cd/lux/m²).**

</tbody>
</table>

¹Entrance Angle - the angle formed by a light beam striking a surface at a point and a line perpendicular to the surface at the same point.

²Observation Angle - the angle formed by the light beam striking the reflective surface and the light beam returning to the observer (from 800 feet, a motorist normally views a marking at approximately a 0.2° observation angle).

Health and Safety Information

Read all health hazard, precautionary, and first aid statements found in the Material Safety Data Sheet (MSDS) and/or product label of chemicals prior to handling or use.
Exceptions

1. Continuous exposure in the hot desert region of West Texas, New Mexico, Arizona, Nevada and parts of California should provide performance for a minimum of five years.
2. Angular exposure greater than 30° from vertical may decrease performance life by two years.
3. Horizontal exposure is not recommended.
4. The sheeting must be completely cut around rivets and between seams for optimum adhesion.
5. Open cells along the edge of the marking may collect dirt but will not reduce the performance of the marking.
6. Damage due to external conditions may show loss of adhesion and reflectivity in the immediate area.

Physical and Chemical Properties

Values given are typical and are not for use in specifications. If a specification is desired, a custom specification will be prepared upon request. Any request for a specification can be submitted through your 3M sales representative. All test samples are conditioned for 24 hours at 73°F (23°C) and 50% relative humidity before testing.

</table>
Adhesion (Instron 12 inch/min. 90˚ pull back)
Degreased Aluminum 5.2 lb./in. (0.93 kg/cm)
Fruehauf Prepainted Panel 4.0 lb./in. (.72 kg/cm)
Stainless Steel 6.0 lb./in. (1.1 kg/cm)
FRP 6.0 lb./in. (1.1 kg/cm)
FRP/Tedlar 3.8 lb./in. (0.68 kg/cm)

Chemical Resistance
Markings are applied to aluminum panels conditioned for 24 hours at 73˚F (23˚C) and 50% relative humidity. Panels are immersed in chemical for 10 seconds and removed for 20 seconds for 10 cycles.
Reference Fuel No effect
Diesel Fuel No effect
Gasoline Leaded No effect
Kerosene No effect
TSP Detergent No effect

Corrosion Resistance
5% concentrated salt spray at 95˚F (35˚C) per ASTM B-117.
1000 hours No effect
80% of original brightness retained

Product Maintenance
Cleaning
Routine washing is recommended for maximum performance. The following cleaning methods are recommended.
• Wash with sponge, cloth or soft brush using water and detergent.
• Automatic truck/car/bus wash or standard high-pressure hand spray:
  Maximum pressure-1200 PSI/ 80 bar.
  Maximum water/wash solution temperature-140˚F/60˚C.
 Minimum of 12 inches/ 30 cm distance of cleaning jet(s) from marking.
 Spray nozzles must spray at a 15 degree flat water fan type pattern.
 Cleaning wand or jets to be at no greater angle than 45 degrees from perpendicular to the markings surface.
• When using metal brighteners, follow manufacturer's recommendations for dilution.
  Thoroughly rinse from marking after soaking vehicle.

Storage
• Cool, dry area out of direct sunlight
• Temperature 65-75˚F (18-24˚C) humidity 30-50%.
• Store rolls horizontally, in carton or in original packaging.

Shelf Life
• Apply 983-71 markings within two years of receipt of material.

General Performance Considerations
Series 983 markings will provide maximum durability when:
• 3M recommended procedures are followed.
• Markings are applied to vertical surfaces.
Actual durability will be based on actual customer use, field testing, exterior exposed testing and artificial weathering testing.
Durability can be reduced if recommended techniques are not followed:
• Failure to cut markings around rivets, seams and body panels.
• Improper use of high pressure cleaning.
• Spillage of chemicals or solvents.
• Improper application or surface preparation.

Warranty
3M warrants that 3M™ Diamond Grade™ Conspicuity Marking Series 983-71 for School Buses sold by 3M to be used for emblems and markings in the United States and Canada will remain effective for their intended use, subject to the following provisions:
3Warranty Period-Years
Canada and U.S. Except Desert Southwest (AZ, NM, and desert areas of NV, CA, UT and TX) 7
Desert Southwest 5
Angular exposure between 10° and 45° from vertical decreases the warranty period by two years. Exposure at angles greater than 45° from vertical is not warranted.

If the 3M marking is applied in accordance with all 3M application and fabrication procedures provided in 3M's product bulletins, information folders, technical memos (that will be furnished to the agency upon request), including the exclusive use of 3M recommended application equipment; and if the emblem or marking deteriorates due to natural causes; such as fading, cracking, peeling, lifting, or discoloration; 3M's sole responsibility and purchaser's and user's exclusive remedy shall be that 3M will provide replacement of the 3M materials per the following table:

<table>

Conditions
Such failure must be solely the result of design or manufacturing defects in the 3M markings and not of outside causes such as: improper handling, maintenance or installation; use of application procedures not recommended by 3M; failure of substrate; exposure to chemicals, abrasion and other mechanical damage from fasteners used to mount the emblem or marking; collisions, vandalism or malicious mischief.

3M reserves the right to determine the method of replacement.

Replacement markings will carry the unexpired warranty of the markings they replace.

Claims made under this warranty will be honored only if 3M is notified of a failure within a reasonable time, reasonable information requested by 3M is provided, and 3M is permitted to verify the cause of the failure.

Limitation and Liability
3M's liability under this warranty is limited to replacement as stated herein, and 3M assumes no liability for any incidental or consequential damages, such as lost profits, business or revenues in any way related to the product regardless of the legal theory on which the claim is based. THIS WARRANTY IS MADE IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OF FITNESS FOR A PARTICULAR PURPOSE, AND ANY IMPLIED WARRANTY ARISING OUT OF A COURSE OF DEALING OR OF PERFORMANCE, CUSTOM OR USAGE OF TRADE.
